IAMM China 2016 Workshop

**Clinical and Educational Applications of Advanced Brain Technologies
Acoustically Modified Music Programs**

Description: Thousands of clinicians and educators have been using music listening therapies from Advanced Brain Technologies for two decades. This workshop will introduce the principles of music listening therapy, its scientific underpinnings, technology, and broad application for children and adults in clinical and educational settings. Learn how you can serve clients on the autism spectrum, with learning, attention, communication, and behavioral difficulties, stress related symptoms and much more. And gain an understanding of how easily this can integrate into your current practice to improve your client outcomes and potential and help them live a fuller, happier life,
